## Objective

AI & Data Science undergraduate with strong foundations in **Data Structures, Algorithms, and scalable software systems**, along with hands-on experience in **AI/ML and real-time applications**. Seeking to contribute to high-performance, distributed systems and AI-driven solutions.

## Education

**B.Tech – Artificial Intelligence & Data Science**

2023–2027

Velagapudi Ramakrishna Siddhartha Engineering College

CGPA: 8.59

## Skills

- **Programming:** Python, SQL, Basic Java / C++
- **Core CS:** Data Structures, Algorithms, OOP, Problem Solving
- **AI/ML:** LLMs (GPT, Gemini, LLaMA), NLP, LSTM, Model Evaluation, Prompt Engineering
- **Frameworks:** LangChain, LlamaIndex, RAG, FAISS
- **Data:** ETL Pipelines, Data Cleaning, Feature Engineering, EDA
- **Systems:** REST APIs, Event-Driven Architecture, MongoDB, AWS
- **Tools:** Pandas, NumPy, TensorFlow, Tableau, Power BI

## Experience

**Data Analytics Intern – Internship Studio**

2024

- Processed and analyzed datasets using Python, SQL, and Pandas to extract insights improving reporting efficiency by 20%+
- Built interactive dashboards and communicated findings to stakeholders for decision-making
- Automated ETL pipelines reducing manual effort and improving processing speed
- Applied algorithmic problem-solving techniques to optimize data workflows

## Projects

**LLM Resume Analyzer (RAG-Based System)**

- Built a RAG-based system using LangChain, FAISS, and GPT to match resumes with job descriptions
- Implemented embedding-based semantic search for accurate skill matching
- Designed scalable pipeline architecture for real-time analysis
- Evaluated multiple LLM outputs and optimized responses using prompt engineering

**Email Triage AI [GitHub]**

- Developed AI-based system for email classification, prioritization, and routing
- Built evaluation loop with reward scoring for performance comparison
- Implemented API-based workflow for automated decision systems

**MedEdge – Patient Identification System**

- Developed face recognition system using deep learning on Raspberry Pi
- Enabled real-time patient identification and history retrieval
- Designed efficient database integration for low-latency systems

**Real-Time Industrial Cybersecurity System**

- Built event-driven architecture for real-time threat detection and alerts
- Integrated WebSockets for live monitoring and automated responses
- Reduced system response latency using optimized pipeline

**Smart Traffic Prediction using LSTM**

- Developed LSTM-based model for traffic prediction using time-series data
- Applied preprocessing and feature engineering for improved accuracy
- Deployed model using Flask API for real-time prediction

**Certifications**

---

- AWS Academy Cloud Foundations — Microsoft Azure Data Fundamentals
- MongoDB Certification — Oracle SQL & PL/SQL
- IBM Introduction to Artificial Intelligence — Cisco Data Science
- NPTEL: DBMS, Privacy & Security — Udemy: Cybersecurity, Generative AI

**Achievements**

---

- Top 12 out of 190+ teams – SRM Cybersecurity Hackathon
- Winner – Debugging Competition
